Panasonic ideas for life

Powerful Communication Features that Fit Your Budget.

Manage communication between multiple locations or remote employees with a system that delivers real value now... and real flexibility for the future.

Improve productivity with consistent, reliable communication.

The Panasonic IP telephony solution integrates your remote employees and locations by giving them easy access to your corporation's central communication hub, letting them enjoy the feature-rich capabilities of their Panasonic Communications System.

Combine the power of your data network with the convenience of the business phone.

Because the Panasonic IP telephony system uses what's called Power-over-Ethernet, or PoE, you don't need a phone jack. You can move your office phones to any location you

want simply by plugging into another data port — no new phone numbers or extensions needed. That's a big plus for any business with an eye on growth.

Enjoy advanced communication capabilities.

Panasonic's Communication Assistant is a productivity application suite that uses the power of the Panasonic IP telephony solution to transform your office PCs into truly amazing, all-around communication tools. Features include Enhanced Voice Messaging (VMA), Instant Messaging (Chat), Presence, MS Outlook Integration and more.
